

MIRROR-LITE PRODUCTS

American Eagle™

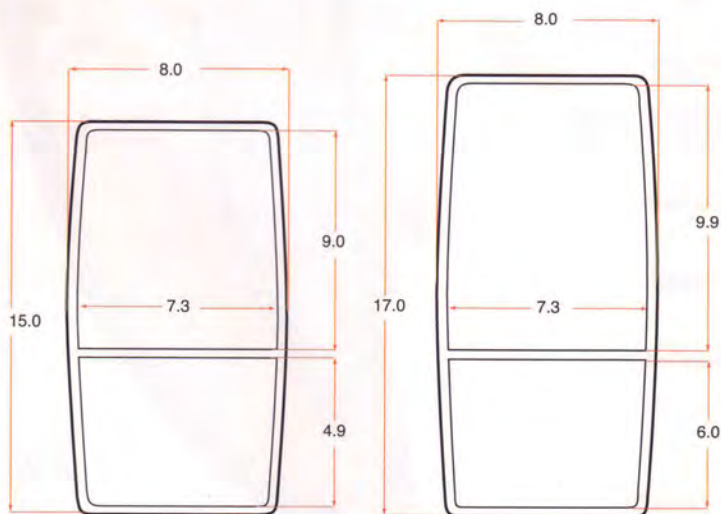

Why Should You Replace Your Remote Mirror with the American Eagle?

The American Eagle is designed to fit the footprint of today's transit style remote control mirrors. Mounting on a 1' or ¾' arm, the American Eagle simply plugs on to your existing arm and wiring. Mirror Lite has long been recognized as a lens technology company, and has applied its knowledge to gain maximum performance from the smaller profile.

The American Eagle boasts a total lens area of 100 square inches. That's nearly 10% more than the competition!

Another benefit engineered into the American Eagle is Mirror Lite's Total System Serviceability. With its patented modular design, Mirror Lite has developed a mirror in which each component can be serviced in the field. Twist-Lock trays allow for glass replacement without having to remove the mirror from the bus or risk handling broken glass.

Why spend hundreds of dollars on replacement mirrors when you can move up to the American Eagle?

The American Eagle is available in both 15 and 18 inch models. Both models boast significantly greater reflective surface area than the nearest competing transit style mirror.

8x15 Bottom Mount
